Chennai 600101

*Detail-oriented **Technical Operations Engineer** with **2.5 years of experience** in application deployment, troubleshooting, and operational support across cloud-based environments. Strong hands-on foundation in **AWS cloud architecture, Linux administration, Terraform, and monitoring systems**, with a proven ability to perform **root cause analysis, log analysis, and customer-facing incident resolution**. Certified **AWS Solutions Architect Associate** and **Terraform Associate**, with practical experience building **serverless AWS solutions** and cost-optimized cloud architectures. Currently pursuing an **M.Sc. in Cyber Forensics & Information Security**, leveraging security fundamentals to design reliable and well-governed cloud systems. Actively seeking cloud-focused roles with emphasis on **AWS, automation, and operational excellence**.*

SKILLS

- **Cloud & DevOps:**
 - Amazon Web Services (AWS): Lambda, S3, SNS, EventBridge, IAM
 - Serverless Architecture & Cost Optimization
 - Terraform (Infrastructure as Code – Associate Certified)
- **Operating Systems:** Linux Administration, Windows Server, Virtual Machine & Patch Management
- **Technical Operations:** Log analysis, RCA, incident documentation, customer escalation support.
- **Security Foundations:** Identity & Access Management (IAM), endpoint security, vulnerability scans, compliance basics.
- **Monitoring & Reliability:** Website uptime monitoring, Alerting & notification systems, Log analysis & service health checks
- **Version Control & Tools:** GitHub (code versioning, project hosting)
- **Programming / Scripting:** Python (automation, HTTP checks, JSON processing – foundational), Bash, SQL
- **Soft Skills:** Agile/SCRUM collaboration, Technical documentation, Stakeholder & Customer communication.
- **Certifications:**
 - AWS Solutions Architect – Associate
 - Terraform Associate
 - Linux Administration
 - ISC2 Certified in Cybersecurity (CC)

EXPERIENCE

ASSOCIATE TECHOPS ENGINEER

Trimble Inc

Chennai, TAMIL NADU

January 2023 - August 2025

- Supported deployment, troubleshooting, and operational maintenance of 6 cloud-based products primarily on Azure.
- Conducted log analysis and RCA to identify and resolve complex system and application issues, ensuring timely resolution of customer-reported problems.
- Utilized SQL Server Management Studio (SSMS) for database modifications and diagnostics supporting backend investigations.
- Collaborated closely with engineering, QA, and product teams, enhancing operational efficiency and ensuring SLA adherence.
- Managed patch deployments, service health checks, and virtual machine administration in Azure environments.
- Documented technical processes, incident reports, and knowledge base articles to aid internal teams and customers.
- Participated actively in SCRUM meetings, providing clear status updates and contributing to continuous improvement initiatives.

PROJECTS

Website Uptime Monitoring & Alerting System (AWS Serverless)

AWS | Lambda | S3 | SNS | EventBridge | IAM | Python

GitHub: <https://github.com/vignesh-svg-ctrl/Website-uptime-monitoring>

- Designed and implemented a **serverless website uptime monitoring system** using AWS Lambda and EventBridge to perform scheduled health checks on public websites.
- Developed a custom **Python-based health check engine** to validate website availability, HTTP status codes, response time, and error indicators.
- Automated **real-time alerting** via Amazon SNS to notify administrators during service degradation or downtime.
- Stored monitoring results in **Amazon S3 using cost-efficient JSON logs**, enabling structured data retention and analysis.
- Built a **public static dashboard hosted on Amazon S3** to visualize real-time website health using dynamically generated summary data.
- Implemented **IAM least-privilege policies** to securely separate public dashboard access from private monitoring logs.
- Optimized the solution for **low operational cost (<\$0.05 for multi-day runs)** using fully managed AWS serverless services.
- Designed the system to **scale for monitoring multiple websites** with configurable intervals and thresholds.

Two-Tier Web Application Deployment on AWS

AWS | EC2 | ALB | RDS | VPC | Security Groups | Linux

GitHub: <https://github.com/vignesh-svg-ctrl/secure-2-tier-web-app>

- Designed and deployed a secure **two-tier web application architecture** on AWS with a **web tier hosted** on EC2.
- Configured **public and private subnets** within a VPC, placing the application behind an **Application Load Balancer (ALB)** for traffic distribution.
- Implemented **security groups and network controls** to allow only HTTP traffic to the web tier and restrict database access to the application layer.
- Installed and configured a **Linux-based Apache web server** to host and serve application content.
- Performed **backup and recovery using EBS snapshots**, restoring application data and configurations after instance termination.
- Designed the architecture for **high availability, security, and operational reliability**.

EDUCATION

MSC IN CYBER FORENSICS AND INFORMATION SECURITY CANDIDATE

University of Madras, **Chennai**

Expected graduation Dec 2025

BCA IN COMPUTER APPLICATIONS

D.G. Vaishnav College, **Chennai**

GPA 8.2

Mar 2023
