

VIGNESH PANDIYAN

Cloud & DevOps Engineer

+91 9025096059 • vigneshcareer7@gmail.com • Chennai, Tamil Nadu 600101 • <https://www.linkedin.com/in/vignesh-pandiyan-sec>

PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with 2.5+ years of experience spanning IT infrastructure support and hands-on AWS cloud engineering. Progressed from systems-level incident management into cloud infrastructure roles — designing and deploying scalable AWS architectures using EC2, ALB, Lambda, S3, SNS, SQS, CloudWatch, and IAM. Experienced with Terraform-based Infrastructure as Code, Docker containerization, and Linux administration. Currently freelancing as a Cloud Consultant while completing an MSc in Cyber Forensics & Information Security. AWS Solutions Architect Associate and Terraform Associate certified. Seeking full-time Cloud Engineer or DevOps roles.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, ALB, VPC, S3, IAM, Lambda, SNS, SQS, CloudWatch, EventBridge, SSM)

Infrastructure as Code: Terraform (VPC, Subnets, ALB, NAT Gateway, IAM Roles, EC2 Modules)

Containers: Docker (Images, Containers, Dockerfile, Basic Networking)

Monitoring & Ops: AWS CloudWatch (Metrics, Alarms, Dashboards), Log Analysis, Incident Management

OS & Networking: Linux (Processes, Permissions, Networking), TCP/IP, DNS, DHCP, Security Groups

Scripting: Python (Scripting, Lambda Functions, Boto3 basics), Bash

CI/CD & Tools: GitHub Actions (GHA – Pipeline Authoring, Workflow Triggers, CI Automation), Git, Jira, Salesforce

Certifications: AWS Solutions Architect Associate | HashiCorp Terraform Associate | ISC2 CC

EXPERIENCE

Cloud Consultant (Freelance) | E2E Technocrats Private Limited

Mar 2025 – Present

Part-time engagement while completing PG studies

- Architected and deployed cloud infrastructure on AWS for a private limited company's operations.
- Designed, developed, and launched the company website; currently managing hosting, uptime, and performance.
- Provisioned and managed AWS resources including EC2, S3, IAM, and CloudWatch for ongoing operations.
- Implemented monitoring and alerting using CloudWatch to proactively detect and resolve infrastructure issues.
- Advise on cloud cost optimization, security best practices, and scalable architecture decisions.

Associate TechOps Engineer | Trimble Inc.

Jun 2023 – Aug 2025

Full-Time | Cloud & Infrastructure Engineering Focus

- Designed and maintained AWS-based infrastructure components including EC2, ALB, VPC, S3, IAM, and CloudWatch as part of the cloud engineering support function.
- Participated in cloud deployments and change windows alongside DevOps and Cloud Engineering teams, validating fixes across staging and production environments.
- Worked with Lambda-based serverless components and SNS/SQS queuing systems during incident triage and infrastructure validation.
- Performed log analysis and performance validation post-deployment; leveraged CloudWatch metrics and alarms for proactive infrastructure health monitoring.
- Handled L2/L3 incident triage for production systems within defined SLAs; led major incident calls and coordinated cross-functional response with cloud, network, and application teams.
- Authored Root Cause Analysis (RCA) documents and implemented corrective and preventive actions to reduce repeat incidents.
- Managed and prioritized support tickets via Jira and Salesforce; maintained structured knowledge base documentation.

Associate TechOps Engineer | Trimble Inc

Jan 2023 – Mar 2023

Internship | IT Infrastructure & Systems Support

- Provided L1/L2 technical support for internal users and production systems, handling ticket triage, escalations, and user communications.
- Supported infrastructure monitoring tasks and assisted senior engineers during incident resolution.
- Gained foundational exposure to enterprise IT operations, SLA management, and ITSM workflows using Jira and Salesforce.

PROJECTS

E2E Technocrats Corporate Website (Live Production) | S3 | CloudFront | ACM | API Gateway | Lambda | SQS | SES | SNS | SSM Parameter Store | IAM | CloudWatch

- Architected and deployed a fully serverless, production-grade corporate website for a live client — end-to-end ownership from design to deployment.
- Hosted static frontend on S3 with CloudFront CDN and ACM-issued SSL certificate for HTTPS delivery with low-latency global distribution.
- Built a serverless contact/inquiry backend using API Gateway (HTTP API) → Lambda → SQS → Lambda (consumer) → SES for email delivery.
- Used SSM Parameter Store for secure management of environment-specific configuration and secrets (no hardcoded credentials).
- Configured SNS and CloudWatch alarms for infrastructure alerting; actively monitor and maintain the live environment.
- Applied IAM least-privilege principles across all service roles; currently managing ongoing operations and cost optimization.

Terraform-Based Two-Tier Web Architecture on AWS | Terraform | VPC | ALB | EC2 | NAT Gateway | SSM | IAM

GitHub: github.com/vignesh-svg-ctrl/Terraform-AWS-Infra

- Designed and deployed a production-style 2-tier web architecture entirely using Terraform IaC — no manual console provisioning.
- Built a custom VPC with public/private subnets across 2 Availability Zones; configured Internet Gateway and NAT Gateway for controlled egress.
- Provisioned private EC2 instances with SSM-based access (zero public IP exposure); deployed ALB with health checks and target group routing.
- Debugged ALB 504 errors through security group validation and health check tuning — end-to-end troubleshooting without SSH.
- Applied IaC best practices — modular, reusable, version-controlled Terraform configurations for repeatable deployments.

AWS Event-Driven Notification System | S3 | API Gateway | Lambda | SNS | SQS | CloudWatch | IAM

- Built an event-driven notification pipeline using API Gateway as the HTTP entry point, triggering Lambda to publish events to SNS.
- Configured SNS fan-out to SQS queues, with Lambda consumers processing messages and dispatching downstream notifications.
- Stored event payloads and delivery logs in S3 for audit and replay capability.
- Applied dead-letter queues and CloudWatch alarms for pipeline observability and fault tolerance.

Serverless Website Uptime Monitoring & Alerting System | Lambda | EventBridge | SNS | S3 | CloudWatch | IAM | Python

GitHub: github.com/vignesh-svg-ctrl/Website-uptime-monitoring

- Built a fully serverless uptime monitoring system using EventBridge-scheduled Lambda functions to perform automated HTTP health checks.
- Configured SNS topics for real-time alerting and CloudWatch alarms for threshold-based failure notifications.
- Created a static S3-hosted monitoring dashboard for visibility; applied IAM least-privilege security throughout.

EDUCATION

MSc in Cyber Forensics & Information Security | University of Madras Jan 2024 – Feb 2026 (Expected)

Final semester completed Feb 2026 | Result expected May 2026

BCA in Computer Applications | D.G. Vaishnav College, Chennai Graduated Mar 2023

GPA: 8.2 / 10

CERTIFICATIONS & TRAINING

- AWS Certified Solutions Architect – Associate
- HashiCorp Certified: Terraform Associate
- ISC2 Certified in Cybersecurity (CC)
- Claude Code in Action – Anthropic (2025)
- Docker & Containerization – Self-directed (2024–2025)
